

Why?

When you are looking for luxury, the High Tech II provides end-users the ultimate restroom experience. With a fresh-flushing system, stainless steel bowl, internal wash station, overhead solar light, built-in paper towel receptacle, and large mirror, it has all the comforts of home. End-users operate the flushing system and hand wash station with a foot pump, which allows for hands-free, germ-free operation. Most of all, each component is designed to form a beautifully contoured interior.

Structurally, the High Tech II is wider than a standard restroom to accommodate all the amenities. For sanitary reasons, the hand wash station has its own separate fresh-water reservoir while the fresh water for flushing is stored in the base. A double-walled capstyle roof, twin-sheet side walls and the added support from the internal components produce an incredibly strong restroom, able to withstand constant use and still maintain its elegant look.
