WHY 75% ALCOHOL BASED TOPICAL SOLUTION?

Hand hygiene is considered a primary measure for reducing the risk of transmitting infection. Hand hygiene procedures include the use of alcohol-based hand rubs (containing 60%-95% alcohol) and hand washing with soap and water.

CDC recommends washing hands with soap and water whenever possible because handwashing reduces the amounts of all types of germs and chemicals on hands. But if soap and water are not available, using a hand sanitizer with at least 60% alcohol can help you avoid getting sick and spreading germs to others. Many studies have found that sanitizers with an alcohol concentration between 60-95% are more effective at killing germs than those with a lower alcohol concentration or non-alcohol-based hand sanitizers.

Due to the COVID-19 pandemic, on March 14th, the FDA has issued new guidance for the temporary formulation of certain alcohol-based hand sanitizer products during the public health emergency.

Satellite is excited to offer a 75% alcohol based topical solution that meets the new FDA guidelines for immediate supply to help operators and communities desperately in need of an effective hand cleaning product.
