

AgWash

Why?

The AgWash™ upright handwash station mounts externally to all portable restrooms to comply with GAP open-air requirements. It also exceeds GAP's minimum tank requirement by holding 17 gallons of water and is equipped with a soap and single-use towel dispenser. The AgWash™ operates by pressing on a recessed foot pump and provides approximately 330 washes.

With the increasing importance of proper sanitation and maintaining a safe work environment, the AgWash™ satisfies both requirements. Show your company that Good Agricultural Practices are important to you by investing in these light and durable hand washing stations. Mount the AgWash™ on the exterior of your restrooms to ensure that workers wash their hands. With an integral paper towel dispenser and easy-to-refill soap dispenser, this handwash station requires minimal upkeep while keeping everyone's hands clean and sanitized.

Specs

Height	66.5" (1689 mm)
Width	16" (406 mm)
Depth	11.25" (286 mm)
Fresh Water	17 gal (64.3L)
Color	Gray
Weight	18.5 lbs. (8.4 kg)

Why?

The Satellite | PolyPortables Hands Free Sink is designed to reduce the possibility of cross contamination on agricultural sites. This sink allows users to wash hands without touching any of the sink features by hand. The spigot heads are operated with a forearm adapter, which allows the flow of water to be controlled without touching the water spigots directly. Various size fresh water delivery systems are available to help maximize the sinks usage in remote areas.
