

Why?

...SAT Lift Kit

Our new wet lift is more universal than any of our previous wet lifts. It is compatible with the Tufway, Maxim 3000, and the Global II with the blow-mold base. This newly designed lift allows you to move it from model to model in a relatively short time making it extremely versatile.

- Max. lift weight including lift kit and restroom is 1014 lbs (460 kg).
- Not to be used for lifting people or objects other than a single standard toilet.

...SAT | POLY Lift Kit

Servicing multi-story construction sites is one of Satellite | PolyPortables top priorities. Making sure any one of our standard units could be accessorized with a lift kit system, Satellite | PolyPortables manufactured a lift kit to fit the Axxis and Vantage restrooms specifically.

To build, simply attach the steel sling to the skid of your standard size portable restroom. A crane will be able to lift the unit into location on an upper floor.

- High Rise Kits are available for use with the Vantage and Axxis units.
- Heavy-duty, weight tested construction insures safety on the job.
- Each leg of the sling is manufactured using painted tubular steel hammered flat at the points and is bolted on to the unit.
- All necessary hardware is included with purchase.

Why Highrise?

See page 21

Uniquely fitted to the Highrise unit, a firm bond is made as the metal bars fasten directly to the unit and the top section has the added flexibility to pivot for added clearance.

Why Poly Mini?

See page 22

Need a restroom that can fit inside any freight elevator? Look no further, the Poly Mini can do just that while retaining all the comforts of a standard size restroom.

Why Tag II?

See page 29

Increasingly, construction sites are requiring hand washing options. As is the case with portable restroom units, hand wash stations need to go where the workers are located, even in high-rise applications.

Why?

Satellite | PolyPortables Fresh Water Delivery System is the newest market entry into the area of on-site water delivery. Our system is specifically designed for use with office trailer toilets or permanently installed sink fixtures. We offer this fresh water system in both 60 and 275 gallon sizes.

Fresh Water Delivery System
