

Maxim 3000

Why?

The most outstanding features of the Maxim 3000™ are its ultra-smooth walls and spacious interior. With no ledges to collect dust, debris or waste, the Maxim 3000™ is able to maintain a clean appearance long after a service call. Inside, the rounded corners create more open space, and a uniquely contoured tank provides end-users a more comfortable sitting position. Along with its beautiful appearance, the Maxim 3000™ is also incredibly strong. By utilizing blow-mold technology to create twin-panel walls and a blow-molded front, the cabana is almost indestructible. The cabana is also strengthened by interlocking corners, a fitted base and an overlapping roof design.

Another clear advantage of the Maxim 3000™ is the simplicity of design. It has 40% fewer parts than a typical restroom, which means there is less to break and fewer parts need to be stocked for inventory.

Other great features of the Maxim 3000™ include deep, well defined corner and roof grips for easy maneuvering, two strong, vandal resistant door springs, a hanging hook and shelf for the convenience of users and a built-in mirror.

Overall, the Maxim 3000™ requires little maintenance, is spacious and has a very modern, sleek appearance. Together, these features make it the ideal restroom for operators and end-users.

Colors

Features

Form fitted to base to improve strength and alignment.

Unique vent pipe design incorporates shelf and hook.

Heavy duty vandal proof door springs.

Overlapping knuckle for extra strength against vandalism.
