## PORTABLE HANDWASH HEATER

Satellite's Portable Handwash Heater is designed to provide warm water for portable handwash stations. The tankless heater does not heat standing water, instead it heats the water on demand, resulting in more consistent water temps. Equipped with two separate lines for water flow, the heater can supply hot water to both spigots at the same time on a two station handwash sink. To meet the FDA requirement for food preparation handwashing, the heater can be plumbed to a single spigot to achieve a more consistent temperature of about 105°F.

The Heater can be plumbed into almost any handwash station using 3/8" polyethylene tubing. It can mount on the side of handwash units, or on the wall of a restroom next to the handwash sink. On the Tag 4 Handwash, this heater can be installed inside the backsplash area, out of sight of the user.

\*Does not heat standing water. EZ Flow™ is an anti-freezing concentrate that keeps water from freezing.

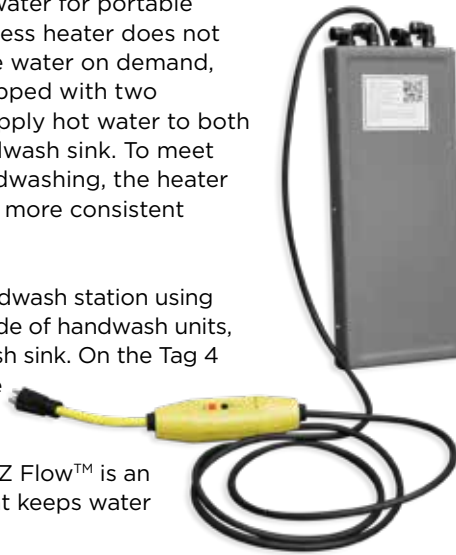

### WATER TEMPS

AIR		WATER
68°F		90°F
15°F		65°F
68°F	Single Spigot	105°F

\*Operating temperatures are approximations.

### SPECS

WATTS	1200 WATTS
VOLTS AC	120 volts AC
AMPS	10 amps
GFCI	Supplied with Heater
WIDTH	7.5"
HEIGHT	19"
DEPTH	2.25"

IN-UNIT SINK
